

Ya-Wen He Resume

Education

March 2007, Ph.D., National University of Singapore, Molecular Microbiology

March 2000, M.Sc., National University of Singapore, Plant Science

July 1995, M.Sc., South China Institute of Botany, CAS, Plant Physiology

July 1992, B.Sc., Central China Normal University, Biology

Post-doctoral Training

2007-2010, Research Fellow, Institute of Molecular and Cell Biology, Singapore.

Professional Experiences

06/2010-present, Professor, School of Life Sciences & Biotechnology, Shanghai Jiao Tong University, Shanghai, P. R. China

10/2006-05/2010, Research Fellow, Institute of Molecular and Cell Biology (IMCB), Singapore

07/2001-09/2006, Junior Research Fellow, IMCB, Singapore

12/1999-06/2001, Assistant Research Officer, IMCB, Singapore

08/1995-08/1997, Research assistant, South China Institute of Botany, Chinese Academy of Science, Guangzhou, China

Research interests

1) Microbial Quorum Sensing (QS):

How the plant pathogen *Xanthomonas campestris* pv. *campestris* (Xcc) regulates virulence factor production via QS mechanisms; how Xcc exits from the QS stage; how the host plant deals with the QS during Xcc infection.

2) Synthetic Biology for Biopesticides.

Identification and characterization of the active metabolites, which have inhibitory effects on plant pathogen growth or induce immunity response in crop plants, from the plant growth-promoting rhizobacteria; Elucidation of the biosynthetic pathway and regulatory network of the active metabolites; Synthetic biology to enhance the fermentation titer of the target metabolites for R & D of new metabolite biopesticides.

3) Bionics wild cultivation of Chinese Medicine Herbs and development of new products.

Papers published in international journals

- Song K, Li RF, Cui Ying, Chen Bo, Zhou Lian, Han WY, Jiang BL[#], and **He Ya-Wen[#]**. The phytopathogen *Xanthomonas campestris* senses and effluxes salicylic acid via a sensor HepR and an RND family efflux pump to promote virulence in host plants. **mLife**. 2024 (in press).
- Chen B, Zhou L, Song K, Thawai C, **He Ya-Wen**. Host plant-derived benzoic acid interferes with 4-hydroxybenzoic acid degradation in the phytopathogen *Xanthomonas campestris* by competitively binding to PobR. **Phytopathology Research**. 2024, 6: 40.
